AGENDA

- 
- 01 Recap - REST API & App Script for Drive
 - 02 透過 Google Apps Script 串接 GWS 常用之 API - Gmail、Drive、Calendar
 - 03 使用 Google App Script 串接第三方開源 API 的應用
 - 04 總結: How Google App Script can help?

01

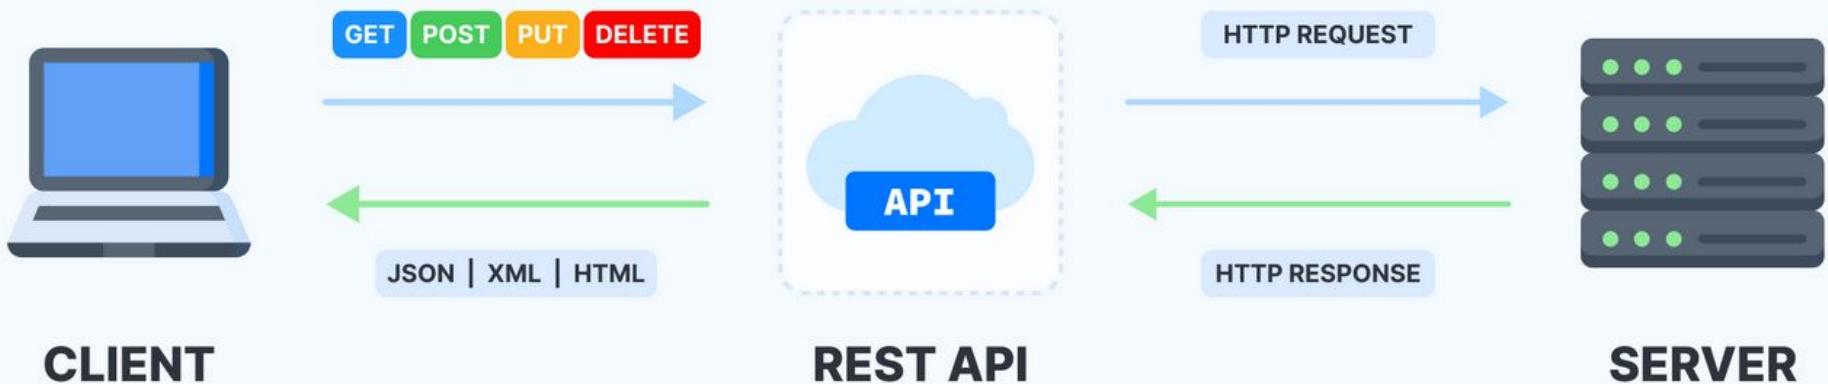

Recap - REST API & App Script for Drive

Recap - RESTful API

REST API Model

Recap - HTTP methods in RESTful API development

HTTP Methods	Path	Action
GET	/products/{sku}	Read
POST	/products	Create
PUT	/products/{sku}	Update
PATCH	/products/{sku}	Partial Update
DELETE	/products/{sku}	Delete

Google Workspace API: Overview

Connect to Google Workspace

REST APIs make it easy to programmatically interact with Google Workspace.

Manage files & sharing

Use the **Drive API** to programmatically search files, upload documents, and manage file permissions.

[View documentation](#)

[Try it out](#)

Manage Gmail settings & messages

Use the **Gmail API** to programmatically send emails, update email signatures, and manage other settings.

[View documentation](#)

[Try it out](#)

Optimize your admin work

Use the **Admin SDK** to programmatically manage new and existing users, audit activity, or get alerts about your account.

[View documentation](#)

[Try it out](#)

Manage calendars & events

Use the **Calendar API** to programmatically add or update Calendar events.

Recap - Drive with Apps Script

Trying to **create a file** to your **drive** from Apps Script!
試試使用 Apps Script 在 drive 中新增檔案吧！

The screenshot shows the Google Apps Script editor interface. On the left is a sidebar with icons for info, preview, refresh, and settings. Below the sidebar, there are two tabs: "drive_demo" (selected) and "advanced_drive_demo.gs". The main area contains the script code:

```
function myFunction() {
  // Create a text file with the content "Hello, world!"
  DriveApp.createFile('text file', 'Hello, world!');
  // Create an HTML file with the content "Hello, world!"
  DriveApp.createFile('test', 'A1', MimeType.HTML);
}
```

Below the code editor is a "執行記錄" (Execution Log) panel. It shows the following log entries:

時間	類型	內容
下午5:34:08	通知	開始執行
下午5:34:09	資訊	ID: 1WVcJ15gDa4mZ44cidEJP6X2mC3pRbhB4, File size (bytes): 12775
下午5:34:10	通知	執行完畢

Recap - A simple workflow with Apps Script

Just **4 lines** to create a **simple workflow**: You can connect sheet, Map and Gmail from now on!
只需用 4 行程式碼就可以建立簡單的工作流程！

Apps Script demo_sheet

The screenshot shows the Google Apps Script editor interface. On the left is a sidebar with icons for info, diff, history, library, and services. The main area has tabs for '檔案' (demo_sheet.gs selected), '執行' (Run), '偵錯' (Breakpoint), 'sendMap' (function), and '執行記錄' (Execution History). The code editor contains the following script:

```
1  /** @OnlyCurrentDoc */
2  function sendMap() {
3    var sheet = SpreadsheetApp.getActiveSheet();
4    var address = sheet.getRange('A1').getValue();
5    var map = Maps.newStaticMap().addMarker(address);
6    GmailApp.sendEmail('martin.chen@mile.cloud', 'Map', 'See below.', {attachments:[map]});
7 }
```

Gmail API

[Send feedback](#)

The Gmail API lets you view and manage Gmail mailbox data like threads, messages, and labels.

Service: gmail.googleapis.com

To call this service, we recommend that you use the Google-provided [client libraries](#). If your application needs to use your own libraries to call this service, use the following information when you make the API requests.

Discovery document

A [Discovery Document](#) is a machine-readable specification for describing and consuming REST APIs. It is used to build client libraries, IDE plugins, and other tools that interact with Google APIs. One service may provide multiple discovery documents. This service provides the following discovery document:

- [https://gmail.googleapis.com/\\$discovery/rest?version=v1](https://gmail.googleapis.com/$discovery/rest?version=v1)

Service endpoint

A [service endpoint](#) is a base URL that specifies the network address of an API service. One service might have multiple service endpoints. This service has the following service endpoint and all URLs below are relative to this service endpoint:

- <https://gmail.googleapis.com>

On this page

Service: gmail.googleapis.com

- Discovery document
- Service endpoint
- REST Resource: v1.users
- REST Resource: v1.users.drafts
- REST Resource: v1.users.history
- REST Resource: v1.users.labels
- REST Resource: v1.users.messages

API Reference Send feedback

This API reference is organized by resource type. Each resource type has one or more data representations and one or more methods.

Resource types

Acl

For Acl Resource details, see the [resource representation](#) page.

Method	HTTP request	Description
URIs relative to https://www.googleapis.com/calendar/v3 , unless otherwise noted		
<code>delete</code>	<code>DELETE /calendars/<i>calendarId</i>/acl/<i>ruleId</i></code>	Deletes an access control rule.
<code>get</code>	<code>GET /calendars/<i>calendarId</i>/acl/<i>ruleId</i></code>	Returns an access control rule.
<code>insert</code>	<code>POST /calendars/<i>calendarId</i>/acl</code>	Creates an access control rule.
<code>list</code>	<code>GET /calendars/<i>calendarId</i>/acl</code>	Returns the rules in the access control list for the calendar.
<code>patch</code>	<code>PATCH /calendars/<i>calendarId</i>/acl/<i>ruleId</i></code>	Updates an access control rule. This method supports patch semantics.

Let's go with Apps Script again!

您需要先完成以下幾件事：

1. A Google Account (登入您的 Google 帳戶)
(Google Workspace accounts might require administrator approval)
2. A web browser with access to the internet (已連上網路的網頁頁面)
3. 開啟「Apps Script」頁面
<https://script.google.com/home>
4. 開啟「練習用程式碼」文件
<https://docs.google.com/document/d/1qnUk49PZQrgD3FVHNKuq7tB8f5gN9IHELe2wDO1bNN8/edit#heading=h.ulg92ayu1gk0>

在 App Script 啟用相關的 API 服務

Gmail with Apps Script(Advanced: API) - List inbox snippets

Apps Script Gmail-Advanced

The screenshot shows the Google Apps Script editor interface. On the left, there's a sidebar with icons for Files, Libraries, Services, and Gmail. The main area shows a script named 'gmail_advanced_List_inbox...'. The code is as follows:

```
1  /**
2   * Lists, for each thread in the user's Inbox, a
3   * snippet associated with that thread.
4   */
5  function listInboxSnippets() {
6    try {
7      let pageToken;
8      do {
9        const threadList = Gmail.Users.Threads.list('me', {
10          q: 'label:inbox',
11          pageToken: pageToken
12        });
13        if (threadList.threads && threadList.threads.length > 0) {
14          threadList.threads.forEach(function (thread) {
15            // Process each thread here
16          })
17        }
18      } while (pageToken);
19    }
20  }
```

Below the code, there's an 'Execution log' section with the following entries:

Time	Level	Message
4:10:14 PM	Notice	Execution started
4:10:14 PM	Info	Snippet: Hi Martin 您好!
4:10:14 PM	Info	Snippet: Hi Martin, 很開心你成功使用了 Google App Script Development Team - Backend Engineer CloudMile Inc. + 隆路一段333號33樓3308室 HK:
